Composite of Natural Resources, Development Constraints & Social Overlay

The composite map was generated by the following weighted summation: 4x(Natural Resources) + (Development Constraint) + 3x(Social Overlay). The original value ranges for each map: Natural Resources (0-12), Development Constraints (0-26) and Social Overlay (0-7). The resulting map identifies critical areas to avoid (high values) as well as areas suitable for development (low values).
